

# INOX EQUIPMENT

Automatically opening  
pressure rated manway.

Remote opening for  
critical hygiene areas.

Remote opening for  
dangerous areas.

Australian made  
and  
AS1210 Australian  
Pressure Vessel code  
compliant.

**APPLICATIONS FOR PHARMACEUTICAL  
AND PETRO-CHEMICAL INDUSTRIES**

## **Pressure Manway Automatic Remote Opening & Closing**

Where critical hygiene or dangerous environments exist, personnel are require to access pressure equipment manway openings and traditionally remove multiple bolts for flange connections to access the internals of pressure vessels.

This process can be hazardous and potentially dangerous if access is restricted and unsafe during the opening process.

INOX have developed a pressure manway compliant with AS1210 – Australian Pressure Vessel code which eliminates the need for flange connections and human contact when preparing to inspect or gain access to the manway opening in the vessel.

The Automatically opening manway operates pneumatically via remote control and allows personel to safely approach a vessel opening.

Suited for pharmaceutical environments where critical hygiene is a concern.

Suited to petro-chemical industries where dangerous equipment requires access or inspection.

**NO FLANGE,  
BOLTED  
CONNECTION  
REQUIRED.**

**REMOTE  
ACTUATION FOR  
SAFETY.**

**STANDARD  
500mm  
DIAMETER  
AVAILABLE**
